Allowance of Application # 10/064,173

1. The following communication is in response to applicant's paper received 18-June-2002.

Examiner's Amendment

2. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the Issue Fee.

2.1 In the Claims:

claim 1 line 1 Change "A method" to –A computer-implemented method--.

Reasons for Allowance

3. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the information described in the related prior art, specifically the article authored by Yang et al., entitled *Robustness Optimization for Vehicular Crash Simulations*. The improvement comprises a system and method for optimizing the design of a mechanical system, wherein a design of experiments matrix is determined using a plurality of design parameters, with each parameter having a range of variation. The matrix is used for creating a plurality of models of the mechanical system and a simulation test, the simulation test being used to output a simulation result for each of the models, the simulation results comprising a performance attribute result for

In re Application of: Dhir et al.

each of a plurality of performance attributes. The method then creates a plurality of response surface models capable of modeling the each of the performance attributes over the range of variation for each of the design parameters, wherein a desired performance metric for each of the response surface models is chosen and a design parameter value is selected from the range of variation for each of the design parameters, whereby the selection optimizes the desired performance metrics for at least one of the response surface models. This patentable distinction is included in each of the independent claims, nos. 1 and 6.

The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <method for optimizing the design of a mechanical system, especially the determination of faulty simulation results, the consolidation of the results in a result summary, and the discarding any faulty simulation results so that the result summary comprises a plurality of accurate simulation results indicating the performance attribute result for each of the plurality of performance attributes> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 3, paragraph 0012 through page 7, paragraph 0022, and Figures 1-3. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.

Response Guidelines

4. Any comments considered necessary by applicant **MUST** be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should clearly be labeled "Comments on Statement of Reasons for Allowance".

4.1 Any response to the Examiner in regard to this allowance should be
